Speech Communication 25 (1998) 275–276

SPEECH COMMUNICATION

Cumulative contents of Volume 25

Volume 25, Number 1–3, April 1998

Papers

J.-C. Junqua and J.-P. Haton
Editorial 1
H. Hermansky
Should recognizers have ears? 3
C.-H. Lee
On stochastic feature and model compensation approaches to robust speech recognition 29
M.J.F. Gales
Predictive model-based compensation schemes for robust speech recognition 1
M. Omologo, P. Svaizer and M. Matassoni
Environmental conditions and acoustic transduction in hands-free speech recognition 75
B.L. Pellom and J.H.L. Hansen
Automatic segmentation of speech recorded in unknown noisy channel characteristics 97
B.E.D. Kingsbury, N. Morgan and S. Greenberg
Robust speech recognition using the modulation spectrogram 117
O. Viikki and K. Laurila
Cepstral domain segmental feature vector normalization for noise robust speech recognition 133
J. de Veth and L. Boves
Channel normalization techniques for automatic speech recognition over the telephone 149
P.W. Shields and D.R. Campbell
Intelligibility improvements obtained by an enhancement method applied to speech corrupted by noise and reverberation 165
A. Hussain and D.R. Campbell
Binaural sub-band adaptive speech enhancement using artificial neural networks 177
Advance table of contents 187
News 189

Volume 25, Number 4, September 1998

Papers

A. Batliner, R. Kompe, A. Kießling, M. Mast, H. Niemann and E. Nöth
M = Syntax + Prosody: A syntactic–prosodic labelling scheme for large spontaneous speech databases 193
W. Minker
Stochastic versus rule-based speech understanding for information retrieval 223
V. Sorokin, V. Olshansky and L. Kozhanov
Internal model in articulatory control: Evidence from speaking without larynx 249
